

MARYLAND'S 2016 EXCHANGE PLANS

Potential Size of Exchange Market: **About 394,000 Maryland residents.**¹

Improving Exchange Coverage in Maryland

Maryland's state-based exchange is responsible for the operation of all core exchange functions. State regulators are charged with reviewing health insurance plans offered on the state-based exchange to ensure compliance with important consumer protections. Under this broad authority, the exchange should strengthen insurance coverage for enrollees by:

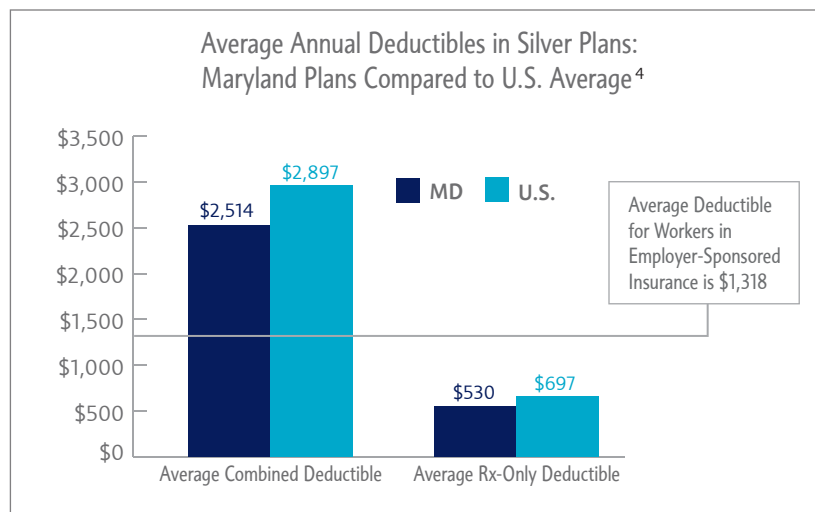

- Enforcing non-discrimination requirements, which apply to benefit design and provider networks; and
- Enhancing its website to allow for more meaningful plan comparisons, including searchable formularies and estimates of total out-of-pocket costs.

Key Facts about 2016 Health Plans in the Maryland Exchange:

Deductibles

- Exchange plan coverage is supposed to be consistent with employer-sponsored insurance²—the vast majority of which covers prescription drugs immediately.³
- In contrast, most exchange plans require that patients either meet a combined deductible for all medical spending—including prescriptions—or have a separate deductible just for prescription drugs. In Maryland, 52% of silver plans have a combined deductible, compared to the national average of 63% of plans.

Cost Sharing

- Prescription drug cost sharing is often a monthly expense for those with a chronic condition. Cost sharing for medicines can quickly become burdensome for those with high monthly costs.
- Coinsurance generally becomes more common on higher cost sharing tiers.
- Patients under 250% of poverty (about \$30,000 for an individual) in exchanges typically qualify for cost sharing subsidies that lower their out-of-pocket costs for silver plans.

Health plans on Maryland’s Health Insurance Exchange are required to cover “Essential Health Benefits” established by federal regulation. Prescription drug benefits are evaluated in comparison to Maryland’s benchmark health plan, which sets the standard for how many medicines exchange plans must include on their formularies. Under the counting rules defined by federal regulation, Maryland’s benchmark plan governing 2016 plans covers 61% of medicines that were available when the benchmarks were originally selected. Starting in 2017, plans will have to meet a new benchmark that covers 87% of

drugs that were available when these benchmarks were selected.⁵ The regulations allow health plans significant leeway in designing formularies to meet a state’s benchmark standard. It is important that states review formularies for compliance with established benchmarks and non-discrimination protections because current federal rules for “counting” prescription drug coverage may allow plans to effectively cover fewer drugs than a state’s benchmark and typical employer plans.

State review of exchange plan formularies is important because:

-  Federal count-based standards related to the number of medicines a plan must cover do not extend to cost sharing. Even if a medicine is covered, it may still be unaffordable. If therapeutic alternatives are not available on a lower cost sharing tier, the benefit design may be discriminatory.
-  Federal counting rules do not provide an incentive to cover combination therapies and extended release medicines.⁶ These medicines play an important role in patients sticking to and benefiting from the treatments they need.
-  There are no rules to ensure consistent coverage or counting of medicines typically included in the medical benefit—these medicines often treat serious conditions such as cancer and neurologic diseases.

Based on an analysis of actual 2016 exchange plan formulary information in Maryland, the following key findings are of particular importance to Maryland residents:⁹

An average of **90%** of brand medicines are covered across a range of key drug classes in the Maryland exchange. The national average is **82%** of brand medicines covered in exchange plans.

An average of **73%** of plans in the Maryland exchange placed all of their drugs in at least one class on the specialty tier. The national average is **80%**. The conditions most likely to be subject to this type of formulary design are cancer, MS and HIV/AIDS.

An average of **22%** of brand drugs have a coinsurance of 30% or higher in the Maryland exchange, compared to a national average of **27%** of brand drugs having coinsurance of 30% or higher.
