

CONNECTICUT'S 2016 EXCHANGE PLANS

Potential Size of Exchange Market: **About 292,000 Connecticut residents.**¹

Improving Exchange Coverage in Connecticut

Connecticut's state-based exchange is responsible for the operation of all core exchange functions. State regulators are charged with reviewing health insurance plans offered on the state-based exchange to ensure compliance with important consumer protections. Under this broad authority, the exchange should strengthen insurance coverage for enrollees by:

- Enforcing non-discrimination requirements, which apply to benefit design and provider networks; and
- Enhancing its website to allow for more meaningful plan comparisons, including searchable provider and formulary functions.

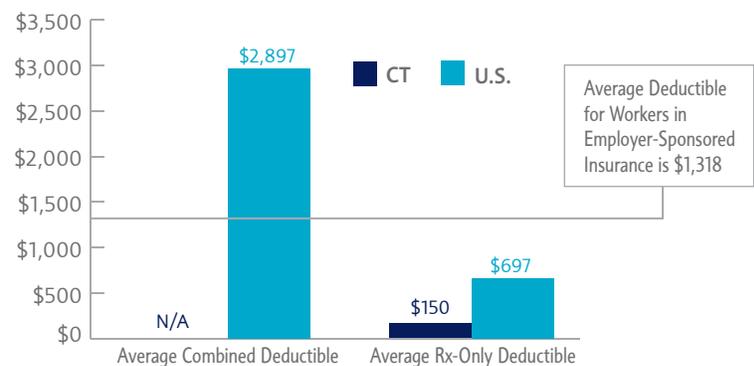

Key Facts about 2016 Health Plans in the Connecticut Exchange:

Deductibles

- Connecticut is among a handful of states that have mandated standardized cost sharing for exchange plans. This means that carriers are required to offer plans with set deductibles and cost sharing.
- Exchange plan coverage is supposed to be consistent with employer-sponsored insurance²—the vast majority of which covers prescription drugs immediately.³
- In Connecticut, all standard Silver plans have a \$150 deductible for medicines placed on the specialty tier which may discriminate against patients who need medicines for effective treatment. Generic and other brand medicines are available without a deductible.

Annual Deductibles in Silver Plans:
Connecticut Standard Plan Compared to U.S. Average⁴

Cost Sharing

- Prescription drug cost sharing is a recurring expense for those with a chronic condition. Cost sharing for medicines can quickly become burdensome for those with high monthly costs.
- Coinsurance generally becomes more common on higher cost sharing tiers.
- In Connecticut, standard Silver plans require copays for preferred brand drugs and those copays are \$35. For specialty tier medicines, standard silver plans in the Connecticut exchange require 20% coinsurance up to a maximum of \$150 per prescription after the drug-only deductible is met.⁵
- Patients under 250% of the federal poverty level (about \$30,000 for an individual) may qualify for cost sharing subsidies that reduce their out-of-pocket costs for Silver plans.

Health plans on Connecticut’s Health Insurance Exchange are required to cover “Essential Health Benefits” established by federal regulation. Prescription drug benefits are evaluated in comparison to Connecticut’s benchmark health plan, which sets the standard for how many medicines exchange plans must include on their formularies. Under the counting rules defined by federal regulation, Connecticut’s benchmark plan governing 2016 plans covers 99% of medicines that were available when the benchmarks were originally selected. Starting in 2017, plans will have to meet a new benchmark

that covers 88% of drugs that were available when these benchmarks were selected.⁶ The regulations allow health plans significant leeway in designing formularies to meet a state’s benchmark standard. It is important that states review formularies for compliance with established benchmarks and non-discrimination protections because current federal rules for “counting” prescription drug coverage may allow plans to effectively cover fewer drugs than a state’s benchmark and typical employer plans.

State review of exchange plan formularies is important because:

-  Federal count-based standards related to the number of medicines a plan must cover do not extend to cost sharing. Even if a medicine is covered, it may still be unaffordable. If therapeutic alternatives are not available on a lower cost sharing tier, the benefit design may be discriminatory.
-  Federal counting rules do not provide an incentive to cover combination therapies and extended release medicines.⁷ These medicines play an important role in patients sticking to and benefiting from the treatments they need.
-  There are no rules to ensure consistent coverage or counting of medicines typically included in the medical benefit—these medicines often treat serious conditions such as cancer and neurologic diseases.

Based on an analysis of actual 2016 exchange plan formulary information in Connecticut, the following key findings are of particular importance to Connecticut residents:⁸

An average of **95%** of brand medicines are covered across a range of key drug classes in the Connecticut exchange. The national average is **82%** of brand medicines covered in exchange plans.

An average of **79%** of plans in the Connecticut exchange placed all of their drugs in at least one class on the specialty tier. The national average is **80%**. The conditions most likely to be subject to this type of formulary design are cancer, MS and HIV/AIDS.

An average of **19%** of brand drugs have a coinsurance of 30% or higher in the Connecticut exchange, compared to a national average of **27%** of brand drugs having coinsurance of 30% or higher.
