The Facts About Medicaid in the United States

Medicines provide great value to Medicaid patients and society by saving and extending lives and preventing unnecessary hospitalizations and other costly health care services. According to National Health Expenditure estimates, national Medicaid spending on prescription drugs will grow roughly in line with overall national Medicaid spending growth from 2019 to 2028.¹

Breakdown of FFY2020 Medicaid Spending in the United States²

Only 4.5% of the total Medicaid budget in the United States is spent on retail brand and generic prescription drugs.

How Medicaid Pays for Drugs

All 50 states and the District of Columbia elect to cover prescription drugs as a benefit under the Medicaid Drug Rebate Program (MDRP). The MDRP is a federal-state-drug manufacturer program that provides significant rebates to Medicaid programs that offset the costs of prescription drugs while ensuring patients can access needed medicines. States, and managed care organizations or pharmacy benefit managers administering the prescription drug benefit on behalf of states, may also negotiate supplemental rebates with drug manufacturers, further reducing spending.

Manufacturers rebate $39 billion back to states and the federal government, which is 57% of the total Medicaid spending on drugs in the United States.

¹ Based on average spending growth between 2019 and 2028 according to U.S. Department of Health and Human Services, Centers for Medicare & Medicaid Services, Office of the Actuary 2020 National Health Expenditure Data (source: NHE Projections 2019-2028 - Tables 3 and 12).

² Menges Group analysis of FFY2020 CMS Financial Management Reports (FMR) and State Drug Utilization (SDU) data files. Brand/generic expenditure totals net of rebates. Data predominantly derived from CMS FMRs. Brand/generic prescription drug costs derived through tabulations performed by Menges. Pre-rebate expenditures tabulated using FFY2020 CMS SDU data files and CMS brand/generic indicators for each NDC. Statutory rebates and fee-for-service supplemental rebate information obtained from CMS FMRs. MCO supplemental rebates available in FMRs for several states and estimated in remaining states at similar percentages as the published FMR data indicate. Generic rebates assumed to always be at the statutory 13% level – no supplemental rebates assumed. Total brand rebates are therefore derived as the difference between total rebates and the generic statutory rebates. Post-rebate expenditures derived through Menges tabulations using above information.
The United States spent $446.6 billion on Medicaid in FFY 2020.

Medicaid and the Children’s Health Insurance Program (CHIP) provide health care coverage to low-income, aged, and disabled individuals and families. Over one-in-five Americans are covered by Medicaid and CHIP. Without Medicaid and CHIP, millions of Americans would not have access to necessary health care services, including prescription medicines.

**The United States’ Medicaid Population by Enrollment Group**

- **Medicaid**: 79.0%
- **Other/Uninsured**: 21.0%

**The United State’s Spending on Medicaid Services**

- **State**: 32.6%
- **Federal**: 67.5%

1. Menges analysis of state website data on enrollment and 2020 Census population data. Totals include CHIP enrollees in states where CHIP is folded into the Medicaid program.
